

A Whole New Paradigm for Golf Course Irrigation - *Rain Bird Integrated Control System*

It had to happen! Someone just had to build a brand new system that would turn the entire golf course irrigation industry on its head! Rain Bird has just done that with the release of the **New** Integrated Control System (ICS)

Where's the field control?
It's right here

Where's the surge protection?
It's right here

Where's the intelligence?
It's built into the rotor and valve

Where are the satellite controllers?
GONE

Where are the decoders?
GONE

It's the easiest to design, install and the most reliable irrigation system on the world market today!

Finally, I don't have to design a course around satellite controllers. Everything is out of sight and underground.

ARCHITECT

ICS offers me maximum capacity. Plus, with reduced calculations, designing is easier.

CONSULTANT

Only two splices and an easily accessible design makes ICS uncomplicated to install.

CONTRACTOR

With ICS, I'm able to have a less complex system with more reliability and easier maintenance.

SUPERINTENDENT
