

## Rain Bird ESP Modular Irrigation Controller

**Another example of Rain Bird's legendary reliability!** The ESP Modular Irrigation Controller is designed to maximize your productivity by saving you time and money. Easily expand from a 4 station base model to 13 stations with 3 station hot-swappable modules, which can be added without powering down the controller.

The ESP Modular offers industry-leading surge protection, temperature tolerance and rugged construction. It improves upon Rain Bird's already easy-to-use ESP style of programming with a large, easy to read display and intuitive programming sequence, making this the most user-friendly irrigation controller in its class. The spacious cabinet and terminal locations make installation and wire-up a snap. And features like the Contractor Default™ program make service calls more efficient and earn you more money by taking less time! The Rain Bird ESP Modular: Maximizing your Productivity.

Rain Bird ESP Modular Irrigation Controller

### Benefits

- 5-year lithium battery (Rain Bird Exclusive) and non-volatile memory, keeps time, date and program schedule in case of power outage.
- Superior surge protection — withstands nearly 3 times higher electrical surges than competitive controllers.
- Easily expandable from a four station base model to 13 stations with the addition of 3-station modules at installation or in the future. Modules can also be installed in any available slot.
- Longer station run times add more flexibility for special applications such as drip.
- Programmable master valve allows pump to operate only as needed, resulting in greater flexibility in controlling the water source.
- Programmable Delay Between Stations allows additional time between zones for water well recovery or slow closing valves.
