

Rain Bird® ESP-LX Series Controllers

Your Rain Bird ESP-LX Series Controller provides efficient, hassle free irrigation.

The Rain Bird ESP-LX Series Controllers offer programming designed to operate your sprinkler system to maximize efficiency and cost savings.

Advantages of your ESP-LX Series Controller:

- **Worry Free.** Your contractor has programmed your controller to water the most important areas of your landscape first, so you never have to worry. This means it may not operate sprinklers in sequential order, but rather in the order of importance.
- **Saves Time.** Your controller can water more than one area of your landscape at the same time. This ensures you are watering during the most practical time of day.
- **Schedule Optimization.** This controller has a start time and stop time to assure you don't water when prohibited by restrictions.
- **Minimize Operating Costs.** Your controller is programmed to decide which areas of the landscape to water at the same time, which can save you electricity and meet local watering restrictions.
